

Changes to Cancer Care Ontario - Colorectal Cancer Screening Program

- The ColonCancerCheck program is switching from guaiac Fecal Occult Blood Test (gFOBT) to the Fecal Immunochemical Test (FIT), effective June 24, 2019
- Eligible patients in the CCC program should continue to be screened using gFOBT until FIT is available
- Laboratories will continue to process CCC gFOBT specimens received up to December 24, 2019 but will reject samples received after that date
- Dynacare currently offers and will continue to provide gFOBT (OHIP-insured) and FIT (not OHIP-insured) testing for patients outside of the CCC program and kits can be picked up at our Laboratory Health Service Centres
