

## Partner Update

April 29, 2022

### **Review of Equation for Estimated Glomerular Filtration Rate (eGFR)**

Recent evidence has emerged suggesting that the equation used for calculating estimated glomerular filtration rate (eGFR) should be reassessed.

This is to inform healthcare providers and customers that Dynacare, in collaboration with other laboratories and clinical organizations, is currently reviewing this evidence to determine if any changes in the calculation of eGFR are required.

We will communicate any recommended changes once this review is completed.

If you have any questions or feedback regarding this, please contact one of the Clinical Chemists below.
